

Create DynamoDB table in amazon console and mention primary key =" Id "

DynamoDB table name & Primary key should be same in "console and cli"

After that create ec2 instance get ssh into moba and hit command

```
aws DynamoDB batch-write-item --request-items  
file:///home/ec2-user/<fileName, where schema stored>ProductCatalog.json  
--region ap-south-1
```

Go to amazon console DynamoDB table and explore the table where it created OR NOT.
