

Step1 - Firstly create instance & get SSH into Moba.

Step 2 - Download & install httpd service in our server.

```
# yum install httpd -y
```

```
# cd /var/www/html/
```

```
# wget https://www.free-css.com/free-css-templates/page275/triple-p
```

```
# unzip triple-p.zip
```

```
# cd /var/www/html/html-freebie-triple-p-master
```

```
# mv * /var/www/html/
```

```
# systemctl start httpd
```

```
# systemctl enable httpd
```

Step 3 - Hit public IP to check weather website running or not.

Step 4 – Purchase Domain from freenom.com

Step 5 – Create route53 hosted zone

The screenshot shows the AWS Route 53 console for a hosted zone named 'jarvisavenger.ga'. The 'Hosted zone details' section is visible. Below it, the 'Records (3)' tab is selected, showing a table of DNS records. The table has columns for Record name, Type, Routing, Differ..., and Value/Route traffic to. There are three records: an A record pointing to 13.234.37.6, an NS record pointing to four Amazon Route 53 name servers, and an SOA record with standard defaults.

Record name	Type	Routing	Differ...	Value/Route traffic to
jarvisavenger.ga	A	Simple	-	13.234.37.6
jarvisavenger.ga	NS	Simple	-	ns-769.awsdns-32.net, ns-1511.awsdns-60.org, ns-1644.awsdns-13.co.uk, ns-427.awsdns-53.com.
jarvisavenger.ga	SOA	Simple	-	ns-769.awsdns-32.net. awsdns-hostmaster.amazon.com. 1 7200 900 1209600 86400

Also **create table** with **A record** and put server's public ip in **Value**.

Step 6 – put all **NS records** in freenom's domain

Freenom.com >> services >> My Domains >> Manage Domain >> Management Tools >> NameServers

Use custom name servers >> and here put all NS records of route53

## Managing jarvisavenger.ga

Information Upgrade Management Tools Manage Freedom DNS

### Nameservers

You can change where your domain points to here. Please be aware changes can take up to 24 hours to propagate.

☐ Use default nameservers (Freedom Nameservers)

☒ Use custom nameservers (enter below)

Nameserver 1  
NS-1511.AWSDNS-60.ORG

Nameserver 2  
NS-1644.AWSDNS-13.CO.UK

Nameserver 3  
NS-427.AWSDNS-53.COM

Nameserver 4  
NS-769.AWSDNS-32.NET

Nameserver 5

Change Nameservers

After successfully changing Nameserver's hit the domain name with extension

**E.g. Jarvisavenger.ga**
