## Firstly, enable IIS in your windows

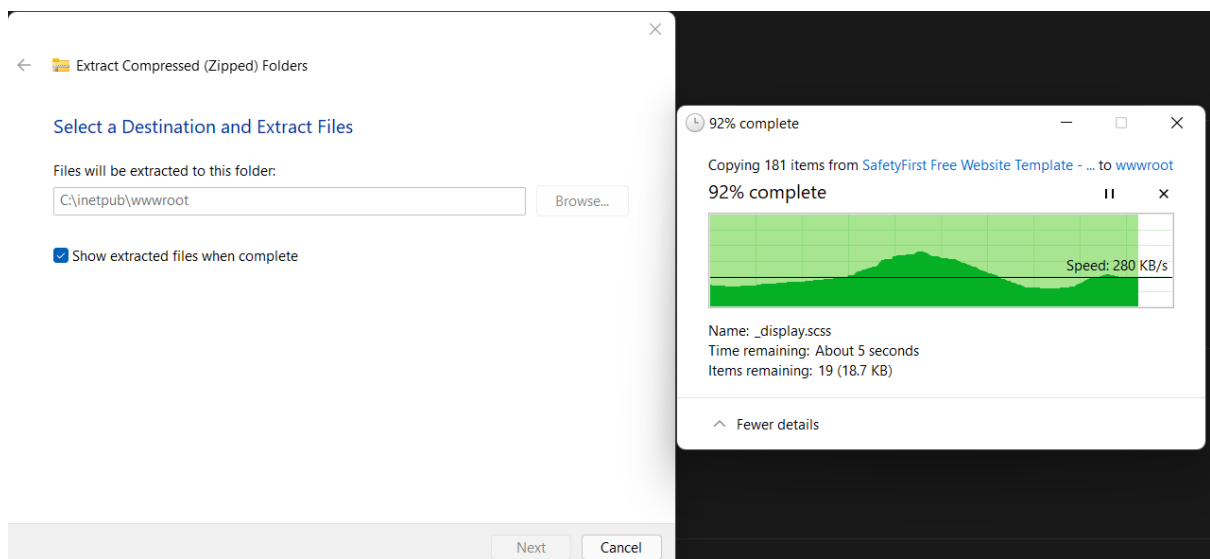

## Enable ISS (Internet Information Services)

Download any Free html page or CSS Template {Downloads}
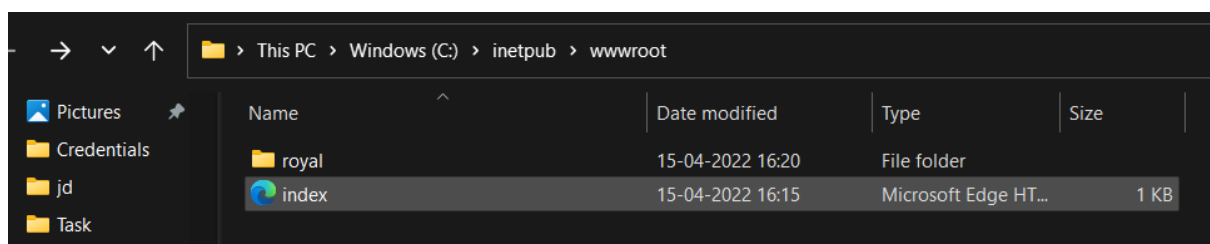

Extracted in { C:\inetpub\wwwroot } default path of windows

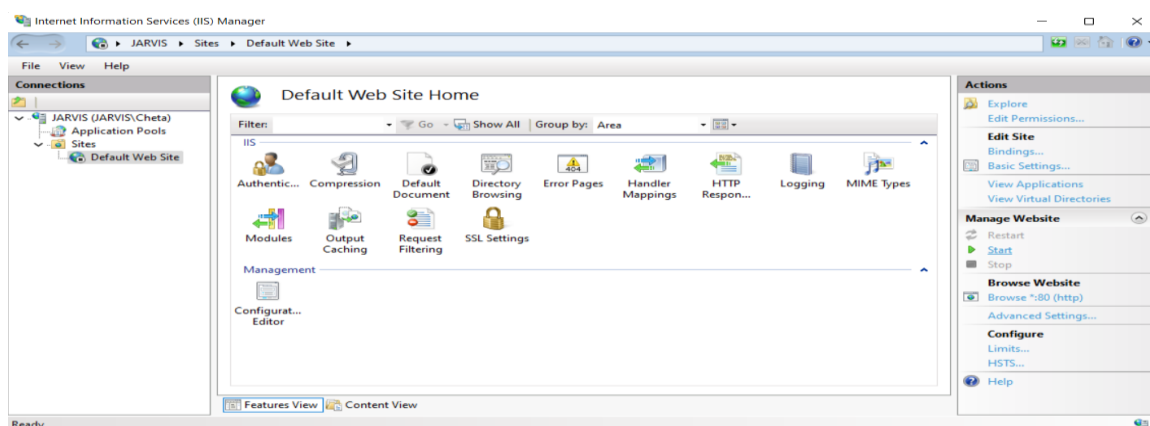

Go to default path from where website will host, & get backup of default file and delete both file

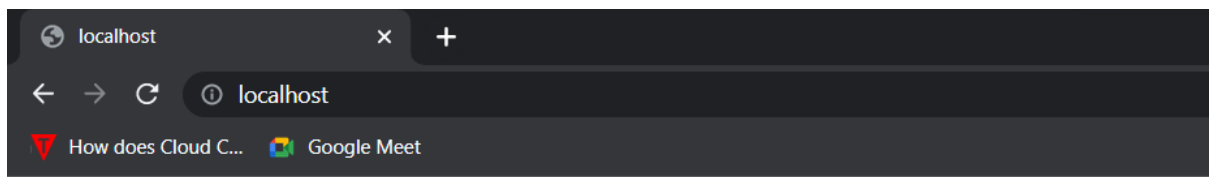

Newly created index page and free CSS extracted template

Go to IIS manager start the service

Hit the website with **localhost**

Try extended web server http://localhost/royal/
